The test cases used in our project are as follows,

AddEmployeeTest.class,

This class is responsible for the tests related to adding a new employee and verify that the program enters this new employee correctly into the database.

LoginTest.class,

This class is responsible for the tests related to the Login Controller and assuiring that user login functionality works as intended.

RegistrationTest.class,

This class is responsible for the tests related to registering new users and testing the functionality of the Registration Controller.

RosterTest.class,

This class is responsible for the tests related to the Availability Controller and testing for its interactions with the database.

ViewBookingsTest.class

This class is responsible for the tests related to viewing and creating new bookings in the database and assuring that the controller correctly inserts these new entries into the database.

The unit tests are run via the TestRunner class.
